Information**

Choosing a system that's right for you

Personal AlertSA provides subsidised approved alert systems and monitoring services.

Devices either come with a base unit connected to a monitoring service, or as standalone GPS personal devices. All devices are 4G compatible, monitored, have falls detection, and come with SIM cards.

Purchase costs for items such as key safes and additional pendants are not covered by PASA.

Options to consider

- Pendant, wristband or watch – Would you prefer to wear it around your neck or on your wrist?
- How heavy is it? – Consider if the weight of the device will be comfortable for you, especially if you will wear it around your neck. GPS-equipped devices are typically heavier than non-GPS.
- GPS or home based unit – A GPS device runs off battery power and can operate while you're away from your home, pinpointing your location if the device is activated. With a home based unit, you need to be at home to enjoy the security benefits.

Monitoring

MePACS	24/7 monitoring through the MePACS response centre.
Tunstall	Can be provided by Tunstall Australasia OR by friends and family – a post-paid voice and data SIM card must be purchased separately for this

Installation

MePACS	Self-install with free telephone support OR \$140 for installation by a technician.
Tunstall	Self-install with free telephone support OR Free installation in metro areas (within 60km radius of Adelaide CBD)
